

SLEEVE PACK - MHSP01

The returnable and reusable sleeve pack bulk container replaces the need for single use cardboard or non-collapsible IBCs. It can stack up to four high due to its 9 leg nestable platform (which can conform to other industry models) and collapses quickly when empty.

The Sleeve Pack's 40" x 48" pallet and cover is made up of a 100% recyclable high density polyethylene plastic and is strong enough for repeated use and economical for one-way applications. Its locking features secure the sleeve to the pallet and cover, and prevents slips or shifts during transit. They are resistant to punctures from forks and retain their integrity through high humidity or moist conditions, making them the ideal shipping container.

Designed for blast freezing, this unique, durable and light weight freezer spacer reduces freezing time by 30% due to its multi-directional airflow design which increases freezing efficiency.

This advanced design is produced with holes throughout for superior drainage, diminishing the risk of water accumulation during thawing and washing, which avoids the sanitation issues of other spacer designs.

By creating a barrier between stacked goods, the freezer spacer allows for optimal airflow between products and reduces the risk of ice accumulation while providing consistent cold storage temperatures.

Lighter and easier to handle than wood or structural foam, these freezer spacers are ideal for palletizing and freezing operations. They nest to 95% space saving storage, strength customization available to adapt a variety of applications.

Made from durable recycled/recyclable HMWH-DPE that these 40L x 48W x 7H pallets feature 9 legs so they stack and nest neatly to save space in the warehouse. They can be used numerous times leading to a reduction in replacement costs, as well as shipping costs due to lighter than wood pallet weight. They feature a textured surface to minimize product movement.

Type: Twin - Fork Entry: 4-way

DIMENSIONS	40L X 48W X 7H
TARE WEIGHT	22 lbs
FLOOR LOAD CAPACITY	7500 lbs
FORK LOAD CAPACITY	1200 lbs

PALLET - MHP40X48

STACKERBOARD - MHSB40X48

The Stackerboard stabilizes double or triple stacked loads of irregular or uneven products. Nine leg placement pockets allow for quick positioning of a variety of 40" x 48" pallets.

Reinforced alignment corners allow for quick product positioning, recessed banding areas for secure strap hold, and optional banding area and striping available for easy recognition and traceability.

Drain holes prevent moisture accumulation and allowing outside storage and sustainability. The lightweight design weighs less than creating worker safety and easy handling.
Will be quoted upon request

DIMENSIONS	40L X 48.31W X 2.14H
TARE WEIGHT	< 20 lbs
EMPTY NESTED	1300 per 53' trailer
